**FOR IMMEDIATE RELEASE**

## **Air Routing International Announces Customer Interface Enhancements to the AiRMET Weather<sup>™</sup> Website**

### **Updated AiRMET Weather Improvements Provide Subscribers High Quality, Detailed Charts, Graphics and Comprehensive Aviation Tools**

Houston, TX. May 2009. Air Routing International (ARI) has developed significant customer interface enhancements, including updated weather graphics on the AiRMET Weather website, [www.airmet.com](http://www.airmet.com).

Air Routing's AiRMET Weather website is a comprehensive weather resource providing subscribers with all of their aviation weather needs. AiRMET offers users a wide range of worldwide weather charts including looping flight level winds, infrared and visible satellite images, and significant weather charts, which are hand drawn by Air Routing's experienced aviation meteorologists.

Additional features include Enroute Text Weather Briefs (i.e., METARs, TAFs, NOTAMs, AIREPs, PIREPs & SIGMETs), a customizable homepage, and an extensive set of aviation tools, such as, the Time/Distance Calculator, Airport Data, links to foreign radar sites, volcanic ash bulletins and Solar Activity.

"Our team of Meteorologists are working hard to transition our graphics to the updated software", says Greg Murray, ARI's Weather and Flight Planning Assistant Manager. "Once complete our customers will see 'broadcast' quality charts, including enhanced satellite and radar images and higher quality hand drawn graphics."
