**FOR IMMEDIATE RELEASE**

**Air Routing International Reports Uninterrupted Flight Support Services to Clients during Category 2 Hurricane Ike**

**Despite Crippled Facilities and Power Outage, Houston Based International Trip Support Provider Attributes Experienced Staff. Round the Clock Technical Support Systems and Planning to Success Throughout Storm**

Houston, TX. September 12, 2008. Hurricane Ike made landfall on the Southwest Texas Coastline and the Houston Metro Area Friday evening September 12, 2008, causing wide spread damage, flooding and power loss. Throughout the Category 2 hurricane, Air Routing International's (ARI) redundant back-up systems and business continuation plan remained in tact and operational, despite loss of power and damage to headquarter facilities.

ARI Operations and Meteorologist staff members were on hand at the ARI facilities throughout the event to provide crucial flight support information and communications to customers, world wide.

ARI had in place 3 redundant electronic communications backup power sources that remained operational multiple days during and after the storm. A secondary operations location, known as the HOT SITE, is fully operational, should any event compromise the primary operation.

"On behalf of our staff and family members we would like to extend our sincere thanks for our clients, vendors and all our friends in the industry who have reached out to us during this challenging time", stated Tim Maystrik, Vice President of ARI. "We have also been in touch with our counterparts in the industry who also reside in the Houston area, each offering the other mutual support...this is a very special industry and we are so proud to be a part of it."
