Air Routing International Announces Suite of Comprehensive, Online Flight Support Tools for Domestic and International Flight Departments at 2009 NBAA.

ARI's new Online Flight Planning[™] and Datalink[™] services complete first round suite of pivotal, cost saving flight support solutions.

Houston, TX. (October 2009) Air Routing International's expert service meets technology in a single interface (www.AirRouting.com).

ARI now offers a comprehensive, technical suite of full service, one-stop solutions that modernize the requirements and ease the complications of international flight. The product suite is supported by ARI's Flight Manager platform.

Online Flight Planning

Driven by customers who wanted more extensive options from existing flight planning engines, ARI's Online Flight Planning service is a single-source Global solution, powered by Flight Manager and provides users with analysis, GPS RAIM Predictions, fuel releases, and airport information.

Datalink

Data and content, including weather, flight plans and concierge services, are combined to provide a flat rate global option for fleets and individual aircraft.

Fuel Stop Analyzer[™] (www.airrouting.com/FuelStop.html)

Complimentary pre-trip planning service that provides both fuel stop options and historical flight data for greater flight cost efficiency.

Online International Trip Quotes[™] (www.airrouting.com/TripQuotes.html)

Online International Trip Quotes provides ARI customers a competitive quoting service with the option to include third party charges.

GPS RAIM Prediction[™] (www.airrouting.com/GPS-Raim-Prediction.html)

ARI's GPS RAIM Prediction provides an integrated solution that combines both FAA's preflight requirements and flight plan to determine satellite options for terminal, en-route and approach.

Runway Analysis[™] (www.airrouting.com/Runway-Analysis.html)

Air Routing's Runway Analysis service combines runway and aircraft performance data to produce take-off and landing performance statistics.

AIR ROUTING INTERNATIONAL[®]

FOR IMMEDIATE RELEASE

APIS Solutions[™] (www.airrouting.com/APIS.html)

APIS Solutions is a service that takes the time and hassle out of meeting your APIS requirements.

Flight Manager[™] (www.FlightManager.com)

Flight Manager serves as the primary engine that allows data and communication access for full service and self service flight planning protocols. Flight Manager is an engine that supports ARI flight operations and equally acts as the interface for customer access.

The single source concept relies on flight department feedback, flight data history, IT development solutions borne of technical aviation experience, the ability to provide both regulatory and real world solutions, and the online tools flexibility, increased accuracy and user friendly nature.

“Our vision was to provide flight departments an unprecedented and complete suite of user friendly flight support tools into a single source solution”, states Roberto Cormack, Air Routing CTO. “The result is a group of products that combine Air Routing’s expert service approach and technology.”

Fifteen, years ago, ARI recognized the need to develop technical solutions to increase client access to global aviation trips. Flight Manager, ARI’s patented and FAA/QICPI approved client interface service was launched in 1997. This pivotal product allowed flight departments to simultaneously monitor all pre-trip, in-flight, on-ground and post trip data, 24-7.

For over 30 years Air Routing International has provided superior flight support service and technical solutions. ARIs Flight Manager set in motion the development of user friendly, parallel technologies that provide superior flight communications and data.

Air Routing is a worldwide leader in superior international trip support and corporate flight handling.
