FOR IMMEDIATE RELEASE

Air Routing International[®] Announces Online Fuel Stop Analyzer[™]

Self-Service Tool that Alerts Users of Possible Fuel Stops for Max Endurance Legs

Houston, TX. October 2009. Air Routing International (ARI) (www.AirRouting.com) has developed a dynamic new tool, called Fuel Stop Analyzer[™], which removes the guesswork out of determining the best fuel stops for max endurance legs on multiple leg trips. Air Routing's Fuel Stop Analyzer (<http://www.airrouting.com/FuelStop.html>) is an intuitive, self-service tool that alerts users of possible required fuel stops and highlights the airports through geographically displayed en-route options, based on each user's pre-selected settings.

Fuel Stop Analyzer determines a selected aircraft's performance by comparing and calculating the manufacturer fuel endurance and trip leg distance. The result provides an estimate of range limitations and geographical fuel stop locations. Additionally, it compares the fuel prices at each location and highlights preferred airports and identifies locations the user has visited in the past.

"Determining potential fuel stops on long range trip legs can be difficult and time consuming", states Tim Maystrik, VP of Air Routing International. "However, using proven, effective methods can better identify the most suitable fuel stops for your aircraft."

To learn more about Air Routing's Fuel Stop Analyzer, please visit our [website](#) or contact Air Routing International (800.987.5680).

Air Routing is a worldwide leader in superior international trip support and corporate flight handling.
